October 8, 2024

Hi Bryan,

We've been connected on LinkedIn for several years now, and I've followed your work and the evolution of Oxide Computing with interest. I respect what you're building and am curious to explore how I could contribute.

While I know there's no shortage of candidates eager to work at Oxide, I want to be clear about where I stand. I spent over 20 years at Microsoft contributing to Visual C++ development, driving quality through testing frameworks, and delivering results on complex projects. I have 21 "Ship It" awards—not because I focused on what looked good on paper, but because I did what needed to be done to get reliable software out the door.

I respect Rust as a language and understand its strengths, but I would take it more seriously if it had a corporate sponsor, an ISO standard, or established "crate" standards. If Oxide is interested in contributing to or leading such an effort to formalize Rust for broader industry adoption, I would be happy to be involved in that process. During my time at Microsoft, I was actively involved in C++ ISO standards development and understand the value that structured guidance and backing can bring to a language's growth.

I'm happy to embrace new technologies and approaches if they're the right tool for the job, but I'm not here to tell you what you want to hear. I'm a cooperative team member, but I'm also someone who values transparency and authenticity. If that resonates with Oxide's culture, I'd welcome the opportunity to discuss how I can add value to your team.

Best regards,

Stephen MacKenzie
